"The coiffeur juste à la main" is a newspaper headline on this link. Can you explain the meaning? A: The French word juste means "just", and is used in this phrase to mean "the most just thing to do" or "the most equitable thing to do". The word juste here is being used in the sense of "justifiable" or "justifiable thing". The phrase "coiffeur juste à la main" means exactly that: the hairstylist is just that, a hairstylist with his or her hair just that way. To make a comparison, in English, we have the phrase "just a hit" which means exactly that, exactly that one got hit. In this sense, the sentence "The coiffeur juste à la main is a hairstylist who provides just a hit." in English would translate to "The coiffeur juste à la main is a hairstylist who provides just the right hit of hair justness." If the hairstylist uses

hair-products, you can ask for "du juste savon" (the just cologne) or "du juste after-shampoo" (the just after-shampoo), and those are linguistic concepts that exist in English as well.

EDIT: I'm not sure what the story is with this "juste", though, I found it in the dictionary as follows: juste = judicious, fair, just (QC) juste a la main: judicious, fair (QC) Comparison of diagnostic accuracy of three CT systems for the detection of fat necrosis of the breast: a phantom study. To quantify and compare the diagnostic accuracy of three helical CT systems for the detection of fat necrosis in the breast in an experimental setting. Fat necrosis is a common pathological finding at mammography. Helical CT is one of the most frequently applied imaging modalities in the breast. Three different CT systems were compared (Siemens Som c6a93da74d
