HD Online Player (Moonwalker [BDrip 720p MultiLang Mul]).Q: Terminate and Begin again inside of a WebBrowser control I have a Windows Form containing a WebBrowser control. The browser is achived by a server. I would like to open the Browser, and after the first request, I would like to ask the user to select a directory to save the download. When the user has selected a directory, I would like to automatically terminate the process and redirect to the same page. The idea is that I close the window and redirect to the same page. I do this only once because I don't have the directory name in memory. If it's not possible, I'm open for all other ideas. I think that I could try to close the window by myself. For this, I'm trying to do something like this: Process p = new Process(); p.StartInfo.FileName = @"c:\myPath"; p.StartInfo.Arguments = filename; p.Start(); p.WaitForExit(); But I'm not sure I will be able to close the process... Is there a way to set the window to close and redirect to the same page? Or any other solution you can suggest? A: I solved my problem by generating a simple pdf file and saving it to the server. The server does the job and sends the pdf back to the user. The most important thing is to add: browsing.Stop(); in the begining of my method. c6a93da74d
